

An AI x-ray foundation model for the Earth's subsurface.

A World Model of the Earth's crust, trained on Norway's open data, sold to the people who are drilling: oil and gas, carbon storage, hydrogen and geothermal.

JEPA INFERENCE

● Measured: three wells and their logs

--- Inferred by JENNIFER

JENNIFER: Joint Embedding Neural Network Inference For Earth Resources

Why Veles wins

- We are building a **World Model of the Earth's crust**. It understands how the subsurface fits together and describes the rock between wells the way a geologist would.
- The model will be sold to people actively drilling and exploring: oil and gas, carbon storage, hydrogen and geothermal. Between wells the rock is unmeasured, and someone has to decide what is there.
- **Norway is the market entry point**. Model licences and an API into the tools operators already use. From Norway the same model applies directly to the UK fields next door. This is an international company.
- Norway has **22 petabytes of public data** describing the Norwegian Continental Shelf, available for training AI models. We are building a pipeline based on the founder's research. This pre-seed pays for the development of the model.
- **Expert Analytics**, our partner, will sell our technology into Norwegian operators, including directly to their clients.

Market

- **\$19B a year** on exploration globally ([Wood Mackenzie, 2026](#))
- **\$3.5B a year** in Norway ([Norsk Petroleum, 2026](#))
- **50% of Norway's oil** is still undiscovered ([Sodir, 2026](#))
- **70 new offshore areas** opened this year ([Ministry of Energy, 2026](#))
- **Channel**: Expert Analytics sells to Norwegian oil and gas today and opens the operator doors for us.

What the market says

- **Vår Energi** (Norwegian operator): pilot meeting set for October 2026
- **ExploreTech** (Stanford spinout): president said he would buy it once built
- **South Park Commons**: accepted into the NYC residency, November 2026

Team

John M. Aiken, PhD

Founder. Physicist. AI in geosciences. Recurser, South Park Commons.

[LinkedIn](#) · [Scholar](#) · [johnspace.xyz](#)

Jack Whattam, PhD

Geologist. Rift basins, volcanic-sedimentary systems, carbon storage, mining. University of Oslo.

Advisers

Ola Skavhaug, PhD

Market adviser. CEO, Expert Analytics.

Thorsten Becker, PhD

Adviser, computational geoscience. Distinguished Chair in Geophysics, UT-Austin.

The ask

\$2M de-risks the model and starts a paid pilot with a Norwegian operator.

18 months Of runway	\$1.2M Three full-time hires (founder, AI researcher, data engineer) plus a geologist	\$400k Compute and hardware	\$400k Office, data, legal, operations
------------------------	--	--------------------------------	---

Milestones

Months 1-4 Data and training infrastructure	Months 4-8 Train, validate on withheld wells	Months 8-12 Pilot with operator	Months 12-18 Paying customer, raise the seed
